

ABSTRACT

Energy Caching for a Computer

5 The following are provided for example: methods comprising determining a value for an energy  
condition affecting at least one computer in a cluster; updating said value continuously;  
comparing said value with a predefined limit regarding said energy condition; and utilizing at  
least one energy mode such as  
storing energy, or operating the computer on stored energy. Systems for executing such methods,  
and instructions on a computer-usable medium for executing such methods, also are provided for  
0 example.
